### **DETAILED ACTION**

This Office Action is in response to the After Final Amendment filed on February 1, 2007

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

This application is in condition for allowance except for the presence of claims 1-6 directed to an invention non-elected without traverse. Accordingly, claims 1-6 have been cancelled.

### ***Allowable Subject Matter***

Claims 8-11, 13, 15, and 20-23 are allowed.

The following is an examiner's statement of reasons for allowance:

In re claims 9 and 23, the prior art references, alone or in combination, do not show a semiconductor device comprising a recess having a pad part and a wiring part, a plurality of insulating regions disposed in the bottom of the pad part, wherein the insulating regions are disposed regularly in the second frame area along a first direction

Art Unit: 2815

at a first period  $P$ , and a width of the first frame area long the first direction is equal to or wider than said first period  $P$ . None of the cited references mention the relationship between the period and the width of the first frame area. As stated in the applicant's specification (pg. 11), width of the first frame area is set wider than the pitch (period)  $P$  to avoid excessive current concentration.

In re claims 21 and 22, the prior art references, alone or in combination, do not show a semiconductor device comprising a recess having a pad part and a wiring part, a plurality of insulating regions disposed in the bottom of the pad part, and the recess being formed so that the insulating regions are not disposed in a near wiring area superposed upon an extended area of the wiring part into the pad part, within a first frame area having as an outer periphery of the pad part and having a first width but disposed in a second frame area having as an outer periphery an inner periphery of the first frame area and having a second width, wherein the wiring width  $W1$  is in a range from 5 to 10 microns,  $L1/W1$  is 35% (or 30%) or higher, wherein  $W1$  corresponds to the width of the width of the wiring part, while  $L1$  corresponds to the width of the first width. None of the cited references mention the relationship between the wiring width and the first width of the near wiring area. As stated in the applicant's specification (pg. 11), the relationship between  $L1$  and  $W1$  is set in this manner to avoid excessive current concentration.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
